Tremco, Incorporated Customer Service Rep:

☐

ANODIZED MATERIAL:

Tremco, Incorporated is not responsible for shade variations inherent to the anodizing process. Welded accessories for coil-anodized finishes are not recommended due to inferior match of touch-up paint at the weld lines. Quick locked accessories will be manufactured unless otherwise advised, and it is agreed that Tremco, Incorporated assumes no responsibility for the color/shade variations in touch up.

You agree by signing below that you understand shade variations may occur in your order and in no way will Tremco, Incorporated be responsible for those variations.

☐

MILL FINISH MATERIAL:

Tremco, Incorporated is not responsible for shade variations inherent in mill finish aluminum.

Aluminum and other metals can stain when water is trapped between wraps, sheets or other mating surfaces. If there is no air flow to remove the water, prolonged contact between the water and the metal causes a reaction between the two which results in water stain.

You agree by signing below that you understand shade variations may occur in your order and in no way will Tremco, Incorporated be responsible for those variations.

☐

METALLIC FINISHES:

Tremco, Incorporated is not responsible for shade variations inherent in metallic finishes. Welded accessories for premium pre-finished metallic Kynar colors are not recommended due to the inferior match of touch-up paint at the weld lines. Quick locked accessories will be manufactured unless otherwise advised, and it is agreed that Tremco, Incorporated assumes no responsibility for the color/shade variations in touch-up. You agree by signing below that you understand shade variations may occur in your order and in no way will Tremco, Incorporated be responsible for those variations.

☐

SHADE VARIATIONS FOR STEEL VS. ALUMINUM MATERIAL:

Tremco, Incorporated is not responsible for shade variations inherent between Steel and Aluminum Materials. Tremco, Incorporated does not recommend grouping Steel and Aluminum substrates as the shade variance could be extreme based on color preference. Tremco, Incorporated does not contain the capabilities to weld steel materials. We can provide welded accessories in .050" or thicker aluminum substrate because of our inferior ability to weld lighter gauge steel. Quick-locked accessories will be manufactured unless otherwise advised. You agree by signing below that it is understood shade variations will occur in your order and in no way Tremco, Incorporated will be responsible for the color/shade variations.
